

MicroGenDX — Simplified Service Explanation

What MicroGenDX Does

MicroGenDX helps doctors and patients figure out what's causing tough infections. They use a special test that looks for germs (like bacteria and fungi) in your body by checking the DNA of the germs. This test works even when regular lab cultures can't find the problem^{[1][2][3]}.

How It Works — Step-by-Step

- Your doctor collects a sample (like urine, swab, tissue, or sputum) from the area that might be infected.
- The sample gets sent to MicroGenDX's lab.
- MicroGenDX uses two advanced tools:
 - qPCR (a fast DNA test for common germs)
 - NGS (Next Generation Sequencing, which checks for hundreds of germs at once)
- In just 3–5 days, MicroGenDX sends your doctor a detailed report showing exactly which germs are there and how much of each one^{[1][2][3]}.
- Your doctor uses this info to pick the best treatment, so you can get better faster.

What You Provide (Input)

- A sample from the infection site (for example: a urine sample if you have a urinary tract infection).

What You Get Back (Output)

- A clear report listing all the germs found in your sample, usually in 3–5 days.
- Your doctor can use this report to choose the right medicine, even if regular tests didn't work^{[1][2][3]}.

Example

Let's say you have a wound that won't heal and regular lab tests can't find what's wrong. Your doctor sends a swab from your wound to MicroGenDX. Three days later, your doctor gets a

report showing exactly which bacteria and fungi are in the wound. Now your doctor knows what's causing the problem and can give you the right medicine.

Sales Pitch (Plain Language)

Most people with tough infections wait weeks for answers—or never get them at all. MicroGenDX gives you fast, accurate results in just a few days, so your doctor knows exactly what's causing your infection and how to treat it. No more guessing. Just clear answers, fast^{[1][2][3]}.

Alex Hormozi Value-Add Pitch

Why settle for slow, hit-or-miss lab tests? MicroGenDX gives you the full picture—hundreds of germs checked in one go, results in just a few days, and a report your doctor can actually use. It's the fastest way to get answers and start the right treatment, so you can get back to feeling good—without wasting time or money on the wrong meds^{[1][2][3]}.

Donald Miller One-Liner

Most patients and doctors struggle with infections that regular lab tests can't solve. We created MicroGenDX's advanced DNA testing to quickly find the real cause, so you get the right treatment and feel better faster^{[1][2][3]}.
