

Trumbull Security Services – For CIOs

The Blind Spot Most CIOs Miss

Security and compliance are not the same.

But most institutions treat them like they are — and that's where risk grows.

Trumbull helps financial institutions separate the two — and manage both with clarity, automation, and control.

Security: Proactive Risk Mitigation

Compliance doesn't mean you're secure.

We focus on actual **threat detection**, not just checking boxes.

- Real-time risk visibility across systems and endpoints
- Continuous monitoring tied to threat intelligence
- Automated alerts mapped to severity and business impact

This gives you actionable data — not just logs — so your team can respond fast and with confidence.

Compliance: Fully Automated, Audit-Ready

Being compliant doesn't mean you're safe.

We help your team stop chasing spreadsheets and start managing from a central command center:

- Auto-mapped controls to frameworks like NCUA, GLBA, FFIEC, PCI, FDIC
- Always up-to-date audit trails
- Reduced prep time and fewer findings

You get full visibility into your institution's regulatory posture — without manual effort.

What You Provide vs. What You Get

You Provide:

- Your current frameworks, policies, and system access

You Get:

- Two distinct dashboards: one for **risk**, one for **compliance**
 - Alerts tied to actual vulnerabilities and regulatory gaps
 - Audit automation with real-time evidence collection
 - Lower cost of compliance, stronger cyber hygiene, and fewer late-stage surprises
-

Why Doing It "Together" Is the Problem

Bundling security and compliance under the same workflows creates blind spots:

- Security teams don't get proactive data
- Compliance teams drown in manual reporting
- Leadership gets a false sense of protection

Trumbull splits the two — and automates both — so each function works better, and together they form a real defense.

One-Liner (CIO Hook Version)

Most CIOs assume compliance means secure — but they're not the same.

We built a platform that separates and automates both, giving you real-time visibility into risk and regulation.

So you can lead with clarity, stay audit-ready, and eliminate blind spots before they become breaches.
